Art Unit: 3738

The disclosure is objected to because of the following informalities: In claim 27, line 4, "fast" should be replaced by --first--. Appropriate correction is required.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 22-26 are rejected under 35 U.S.C. 102(b) as being anticipated by Andersen et al., US 5,876,445. In claim 22, the term "portion" can be interpreted more broadly than in other claims because it is not characterized (e.g., "extending from ...") relative to other "portions". The term "wound coil portion" (instant claim 22, line 3) can thus be viewed not as a complete coil but as a portion of a coil. Moreover, "[t]he stent is formed by knitting preferably a nitinol wire into a pattern of overlapping loops" (Andersen et al.: abstract, lines 2-4; emphasis added). Each circumferential ring of loops, or a portion thereof, is therefore seen as a "wound coil portion". As seen from column 4, lines 16-30, a valve or sphincter portion collapses under radial compressions so as to impede the flow of body fluid unless the internal body fluid pressure overcomes the compressive stresses or pressures. Such a valve device is provided in various diameters and lengths (e.g., Table 1) and, at least for some embodiments, is thus *capable* of being-placed within an intramural tunnel portion of a ureter so as to extend into a bladder,

Application/Control Number: 10/006,083

Art Unit: 3738

whether or not such was the intent. Moreover, it has been held that the recitation that an element is "adapted to" perform a function is not a positive limitation but only requires the ability to so perform. It does not constitute a limitation in any patentable sense (*In re Hutchison*, 69 USPQ 138). MPEP 2106, section II. C., explains that language which suggests or makes optional but "does not limit a claim to a particular structure does not limit the scope of a claim or claim limitation"; "examples of language that may raise a question as to the limiting effect of the language in a claim" are "adapted to" and "adapted for" clauses. Regarding claims 23-25: column 8, lines 38-41; column 11, lines 52-54; column 14, lines 22-24. Regarding claim 26: column 9, lines 40-45.

Claims 1-21 and 27-37 are allowable over the prior art of record.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dave Willse whose telephone number is (703) 308-2903, and as
